

# UNIVERGE® SV8300 Communications Server

## Overview

The speed of business today demands efficient, seamless communications to enable rapid decision-making and customer responsiveness. To succeed at this accelerated level, medium-sized businesses must have the right communication tools. NEC provides those businesses with the communications and networking solutions that enable them to succeed.

The UNIVERGE® SV8300 Communications Server is a robust, feature-rich solution that is completely scalable and can be expanded to meet a medium-sized business' communications needs, now and in the future.

## At a glance

- Scalability for the growing business
- Support for VoIP and traditional voice
- Enhanced centralised management
- Increased productivity
- Diverse features
- Seamless networking

## Scalability for the growing business

The SV8300 functions alone or in a network and can expand to meet all of your business' communication needs, including mission-critical data applications.

## Support for VoIP and traditional voice

You can deploy a pure IP solution or any combination of IP and traditional circuit-switched technology on a single SV8300. It provides the ability to customise the best communications solution for your business.

## Enhanced centralised management

The SV8300 offers centralised management of your phone and enterprise communications system; moves, adds and changes of SV8300 phones are quick and easy, via intuitive, easy to use, web-based management tools. Simply plug any phone into any jack wherever it's needed. It's ready to go!

## Investment protection

Protect your technology investment while providing a migration path to pure IP. The SV8300 has the flexibility to support your existing traditional circuit-switched technology and can be fully utilised to run in a pure IP environment.

## Increased productivity

The SV8300 delivers a full suite of advanced applications and a high-powered feature set that helps businesses run smoothly. Workers can manage their calls more easily, and the mobility that the SV8300 provides to staff helps customers access your employees even while they are away from their desks.

No other solution provides medium-sized businesses with more versatility than the SV8300. Designed to be both versatile and scalable, the SV8300 meets a growing business' needs. All communication methods are supported, whether IP, video or Wi-Fi. Its resources and features can be transparently shared between branches or remote locations by networking SV8300s, which provides a lower total cost of ownership.

Any medium-sized business can benefit from the advanced, enterprise-grade applications supported by the SV8300. The SV8000 Series Hospitality Management Solution is even imbedded in the SV8300 for simplified license activation. Additionally, the SV8300 supports a full range of advanced features and applications, such as Unified Communications for Enterprise (UCE) and Unified Communications for Business (UCB).

UNIVERGE®360 is NEC's approach to unifying business communications. It places people at the centre of communications and delivers on an organisation's needs by uniting infrastructure, communications and business.

## Diverse features

The SV8300 streamlines communications for the entire organisation with its diverse suite of features and applications. It enables individuals, departments and locations to work more efficiently by ensuring seamless internal and external communications.

Support is provided for a wide range of tools and features that enhance productivity. Features including Calling Number Display, Conferencing, Mobile Extension, Soft Keys, Voicemail, Unified Messaging and Speed Dialling are all supported. Wireless handsets and softphones provide cost-effective mobility and convenience.

Windows®-based PC Pro provides centralised online programming access.

## Seamless networking

The SV8300 provides IP communications, such as data, multimedia and voice, over one network. There is no need to run two sets of wires for voice and data; one wire does it all. Branch or remote locations can be seamlessly linked to share resources and features through peer-to-peer connectivity.

Additionally, the SV8300 easily links to other NEC communication servers. A geographically distributed unified system with a single image can be produced by using NEC's UNIVERGE® MA4000 Management System to ensure application integration, feature transparency and survivability in the event of network failures.
